Load

Load

1) create_engine
2) inspector
3) pandas to load

Create database connection

```
database_name="inflation_db"
rds_connection_string = f'{protocol}://{username}:{password}@{host}:{port}/{database_name}'
engine = create_engine(rds_connection_string)
inspector = inspect(engine)
```

```
# Confirm tables
inspector.get_table_names()
```

```
['annual_inflation',
 'us_inflation_hist',
 'usa_monthly_cpi',
 'unemployment',
 'income']
```

Use pandas to load DataFrames into database

```
annual_inflation_transformed.to_sql(name='annual_inflation', con=engine, if_exists='replace', index=True)
```

```
US_inf_rate_hist_transformed.to_sql(name='us_inflation_hist', con=engine, if_exists='replace', index=True)
```

```
USA_monthly_cpi_transformed.to_sql(name='usa_monthly_cpi', con=engine, if_exists='replace', index=True)
```

```
unemp_transformed.to_sql(name='unemployment', con=engine, if_exists='replace', index=True)
```

```
cleaned_income_df.to_sql(name='income', con=engine, if_exists='replace', index=True)
```

Load

Confirm Data load

Confirm data has been added by querying the tables

```
annual_inflation =pd.read_sql_query("SELECT * FROM annual_inflation", con=engine)
annual_inflation.head()
```

Story Time

- On average how long has an inflation or deflation lasted?
- What precedent world events are similar to events happening in the world now, and how will this affect current inflation rates within the next two years in the U.S?
- Have annual income growth and employment rates kept up with the changes from annual inflation rates in the past?
- Knowing that the Federal Reserve intervenes when inflation rate is not at a healthy 2%, then by looking at annual inflation rates we can predict the Federal Reserve's next move. It will either be an Expansion to slow down inflation or a Contraction during a recession.
